Concrete effect tiles for indoor and outdoor use

*Novoceram, French ceramic producer since 1863, unveils a concrete effect collection of coloured body porcelain stoneware tiles, available in the 90x90cm format.*

## PRESS RELEASE

**Teranga** is a collection of full body coloured porcelain stoneware tiles that **Novoceram**, French ceramic producer since 1863, has especially designed for the realisation of indoor and outdoor flooring.

**Teranga**, a collection of tiles with a concrete effect, presents the same aesthetic minimalist details that characterise concrete such as subtle cracks. Adapted to large contemporary spaces, the Teranga collection is available in new formats including the 30x90cm and 90x90cm.

Teranga is also available in the Outdoor plus range in an extra-large format: the rectified 90x90cm that has a 20mm thickness and is especially designed for outdoor spaces, and for various types of installation methods such as traditional laying, laying on gravel or as stepping-stones, and raised installation.

To find out more about Teranga and to (re)discover all Novoceram collections, please visit our [official website](#) or consult our [Facebook page](#).

Concrete effect tiles for indoor and outdoor use

## OUR CERTIFICATIONS:

- **ISO EN 9001**: standard that sets out the requirements related to the **company's quality management system** that is part of a continual improvement at all levels which include: customer relations, willingness to communicate, internal organisation, relations with suppliers and production processes.
- **ISO EN 14001**: standard that sets out the requirements related to the **environmental management system**, based on **environmental commitment**, strict standards and on increasingly ambitious goals that the company has implemented to control and reduce its impact on the environment and to improve its performance continuously.
- **ISO EN 50001**: standard that sets out the requirements related to **energy management systems**. This certification, driven by the wish to better control and optimise energy consumption, is the logical continuation of a continual improvement approach and an environmental commitment.

## PRODUCT CERTIFICATIONS:

- **UPEC Classification**: determines if the products are **suitable** for the premises for which they were designed. The ISO standards define the criteria used for this classification that evaluate the resistance of tiles to wear, puncturing, water, stains and chemicals.
- Novoceram products are involved in obtaining various ecological certifications for the construction industry such as the French certification **HQE** (High Environmental Quality) and the American one, **LEED** (Leadership in Energy and Environmental Design) certification. Finally, Novoceram has also commissioned the **PEF** (Environmental Performance Footprint) and **EPD** (Environmental Product Declaration) of its products, which indicate the potential environmental impact of a product throughout its entire life cycle.
- **Indoor emissions**: index measuring emissions of volatile substances posing a risk of inhalation toxicity. All our tiles are assigned **A+**, - the best note in this classification. Furthermore, as **they do not contain Volatile Organic Compounds (VOCs)**, they even outperform all the requirements of the A+ classification.

**INFORMATION:** Our press office, the Novoceram and executive team remain at your disposal for any further information or for an interview on products, events or the company. Please feel free to contact us by email: [pressoffice@novoceram.fr](mailto:pressoffice@novoceram.fr)
